Customer Reviews

McGraw-Hill authors represent the leading experts in their fields and are dedicated to improving the lives, careers, and interests of readers worldwide

So far I think this is a good resource for teaching science. I'm not patterning my lessons after it but I use it to get grade-level background info on scientific laws and concepts.

I am so pleased to have found this text book on . The book is brand new and not a mark in it. I simply bought it so my child didn't have to bring it home everyday to do homework. The book is well written and is easy for a 7th grader to follow. The chapters and units are very well organized. The labs are very reasonable and doable both in and out of the classroom.

This is a comprehensive middle school science text, equivalent to our 7th grade Life Sciences courses. Doesn't start a war between evolution and creationism in the text. Each end of chapter allows for vocabulary review, topic review and expands to encourage the student to make

predictions and provide their reasoning. Also has chapter end sections encouraging real world use of the material and presentation skills (i.e. one chapter example recommends a student collect some fossil samples and present them to their group). Slightly distracting with the sheer number of colored pictures sprinkled throughout the text, so could be an issue for a student who gets easily distracted. However, the picture examples could also be beneficial for those students who benefit from a visual connection.
