XML For Catalogers And Metadata Librarians (Third Millennium Cataloging)

Synopsis

This book provides a foundation of knowledge for catalogers, metadata librarians, and library school students on the Extensible Markup Language (XML) – one of the most commonly listed qualifications in today's cataloger and metadata librarian job postings. – Covers XML from basic concepts, such as core syntax and grammar, to advanced topics, such as transformation and schema design – Provides an in-depth look at metadata standards used in the library domain, including MARC, Dublin Core, MODS, and others – Introduces available XML tools, utilities, and XML related technologies – Includes case studies that draw from real-world applications that show how XML is used in library cataloging and metadata workflows

Book Information

Customer Reviews

"A good foundation for implementing XML technologies. . . . The included case studies may very well inspire readers to investigate potential projects that expand library services. . . . The inclusion of exercises, topics for discussion, and working examples can be used in a classroom setting.

Readers may also use the text for personal study to gain a working knowledge of XML technologies." - ARBA

Timothy W. Cole is mathematics and digital content access librarian; professor of library and

information science; and professor, university library, at the University of Illinois at Urbana-Champaign. Myung-Ja K. Han is metadata librarian and assistant professor, university library at the University of Illinois at Urbana-Champaign. She has published papers on metadata quality and bibliographic control in various journals.
